

# summer ICFO 2015 FELLOWS

## Research Fellowships in Barcelona

From July to September 2015, ICFO will be hosting its summer research fellowship program, providing a unique opportunity to carry out a challenging research project in one of the topics active at ICFO. The program aims at an early exposure of outstanding students to frontier science and research. Suitable candidates are ideally within the last two years of their Master-equivalent or Engineering degree studies (eligible areas include Physics, Engineering, Chemistry, Mathematics and Biology).

The ICFO Summer Fellows are hosted and coached by the different ICFO research groups. While conducting research, they engage in a focused training program covering the basics and applications of the different research topics active at ICFO.

biomedical optics and biophotonics  
nanoscopy and super-resolution imaging  
nanotechnology and nanophotonics  
nonlinear optics and atom optics  
quantum optics and quantum information  
atto-science and ultrafast physics

- optical sensing and optoelectronics
- green technologies and photovoltaics
- graphene physics and nanomaterials
- single-molecule physics
- ultracold quantum matter physics
- advanced laser technology

Are you interested in becoming an ICFO Summer Fellow 2015?  
For further details and to submit your application, please see the call
